

Data Sheet

Kalitec's Flexible Marker are to be installed in the middle of the road to show message as well as making motorists to slow down. Thanks to its Steel-Flex core, the Marker will bend upon impact then go back to its vertical position. Prints are protected by a laminated anti-UV film.

> Specifications

- Two (2x) 3 mm, clear polycarbonate (Lexan) sheets with printed, high intensity grade vinyl (custom print available)
- Installed on a Steel-Flex with stainless steel screws and rivets around the edges
 - The Steel-Flex is made of a painted, spring-steel blade and a flexible polymer base (see product's data sheet).
