

KALIFIX™ : THE ONLY BREAKAWAY SIGN SUPPORT SYSTEM THAT CAN BE STRAIGHTENED AT ANY TIME

Kalifix™ is a secure signage support that yields under impact. At the heart of Kalitec technology, it has been designed to protect structures and facilitate their return to service after a collision. More than 300,000 posts installed in Canada, providing better protection to road users than conventional sign supports.

HOW IT WORKS ?

Equipped with two flexible steel rods, the pin connecting the post to their anchor is designed to yield when the post is damaged and allows it to be temporarily straightened following a low-speed impact.

Safer

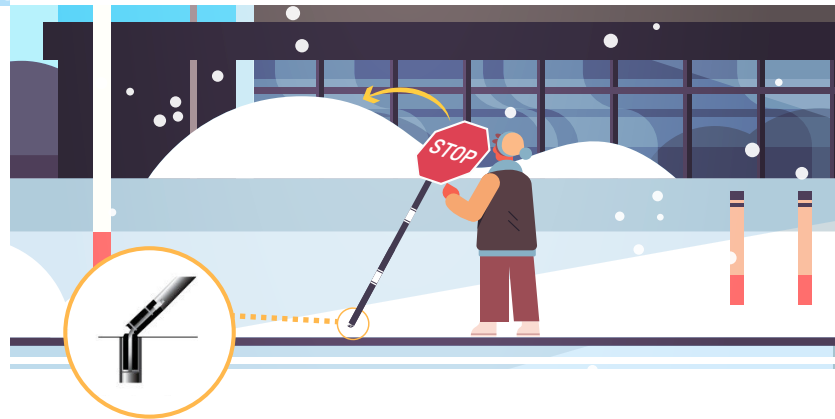

- > Crash-tested (NCHRP-350)
- > Straightening back & repair 365 days a year

Durable

- > 40 years service life
- > Hot-dip galvanizing

Eco-responsible

- > Materials up to 95% reusable after impact
- > Up to 4x fewer GHG emissions over its lifetime

Repairs in
3 minutes

Repair
365 days a year

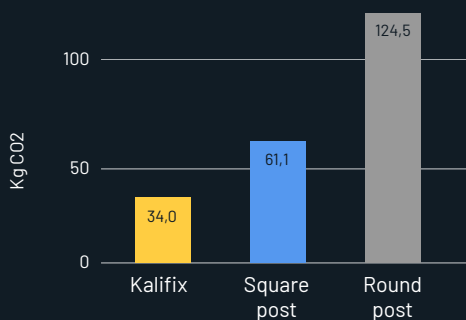

Profitable in
4 years

2 to 4 times
less CO2

ECO-FRIENDLY

Total CO2 emissions over 40 years

ECONOMICAL

Installation and maintenance costs (for 100 posts, over 15 years)
